A broad spectrum, ready-to-use insect dusting powder for residual treatment.
Used in the control of Ants, Bedbugs, Cockroaches, Fleas, Silverfish, and Crickets

Net Weight

CAUTION

Specimen Label

Left of Main Panel

Wefco ACTIVE[®] Insecticide Dusting Powder is a ready-to-use residual treatment for the control of crawling insects in local authority premises, public health situations and industry, including premises where food is stored, prepared or eaten. It is particularly valuable in situations where water or oil based insecticide formulations cannot be used.

The product may be used in the following situations:

Public Health including households, schools, hostels, hospitals, hotels, disinfestations clinics etc.

Food Handling and Storage including kitchens, canteens, restaurants, factories and warehouses.

Small Animal Bedding in domestic premises, kennels, pet shops, animal clinics, animal houses etc.

DIRECTIONS FOR USE:

USE ONLY AS DIRECTED.

Cockroaches, Beetles, Silverfish, etc.

Liberally apply a band of powder to the floor along skirting boards, at wall/floor junctions, around cookers, fridges, fireplaces, pipes, rubbish chutes, dustbins, in cupboards and other places that insects are known to run or where they may find harbourage. Blow or sprinkle dust into cracks and crevices. Leave the powder undisturbed for as long as possible.

Ants, Crickets

Sprinkle powder freely along insect runs and around nests. Where ants are invading premises apply liberally to points of access, e.g. doorsteps, window frames, airbricks, cracks and crevices and in electrical junction boxes.

Fleas and Bedbugs

Before applying the powder, ensure that the surfaces are clean and dust free. Vacuuming will remove dust, fluff and debris. If a vacuum cleaner is used ensure small amount of the **Wefco ACTIVE[®] Insect Dusting Powder** is sucked into the vacuum bag to kill adults and larvae before removing.

Sprinkle powder on floors, carpets, bedsteads, bedsprings, mattresses and upholstered furniture: wait several hours before vacuuming. Pay particular attention to insect harbourages such as cracks, crevices, seams, and folds of fabric.
